1. Preface

1.1. About This Document

The present Installation Guide describes the hardware of the Ewon® Cosy+ which is an industrial gateway / router fully compatible with the [Talk2m cloud connectivity services](#).

For additional related documentation and file downloads, please visit our [Support](#) website.

1.2. Document History

Version	Date	Description
1.0	08-01-2020	First release
1.1	25-06-2022	Temperature specification update
1.2	20-09-2022	Added Ewon® Cosy+ Models EC7133J/K/L/M specifications
1.3	28-11-2022	General layout review
1.4	27-03-2023	Recent upgrade to UL/IEC/EN 62368-1 Third edition for Ewon Cosy
1.5	11-01-2024	Added Ewon® Cosy+ Models EC7133K_01/N specifications
1.6	09-07-2025	Adapted for Firmware 23.0s0

2. Product Summary

2.1. Type & Part Numbers

There are 5 models of the Ewon® Cosy+ each proposing different communication media.

They include the following part numbers:

Part number	Model	Model name	Description
EC71330_00MA	01702	Ewon® Cosy+ ETH	LAN / WAN – 4 Ethernet ports only
EC71330_00MA	11702	Ewon® Cosy+ ETH (Realtek)	LAN / WAN – 4 Ethernet ports only (Realtek)
EC7133J_00MA	04002	Ewon® Cosy+ WiFi	LAN / WAN, Wi-Fi – 4 Ethernet ports, WiFi Modem (802.11 a/b/g/n)
EC7133K_01MA	04102	Ewon® Cosy+ 4G NA	LAN / WAN, 4G quad-band – 4 Ethernet ports, Cellular Modem (NA)
EC7133L_00MA	04302	Ewon® Cosy+ 4G EU	LAN / WAN, 4G quad-band – 4 Ethernet ports, Cellular Modem (EU)
EC7133M_00MA	04402	Ewon® Cosy+ APAC	LAN / WAN, 4G quad-band – 4 Ethernet ports, Cellular Modem (APAC)

The part number syntax is explained in the [Label \(page 9\)](#) section.

Technical specification and certification by model can be found in the [Ewon Ewon® Cosy+ models \(page 16\)](#) section.

2.2. Hardware General Specification

Characteristic	Value
Design	Industrial design: <ul style="list-style-type: none"> • 24Vdc power supply • DIN Rail mounting • Extended temperature: -25°C to +60°C
Clock	Backed up real time clock (RTC) Backup battery lifetime has 10 years expectancy
Ethernet Interface	LAN Ethernet port 10 / 100 Mbps
Digital Input	2
Digital Output	1
Mounting	Latch is DIN Rail EN50022 compliant.

2.3. Typical Applications for Ewon® Cosy+

You can use the Ewon® Cosy+ for :

- Remote access of Ethernet and / or USB devices using a Talk2m connection

The Ewon® Cosy+ should not be used

- As a pure Ethernet switch

3. Safety, Environmental & Regulatory Information

3.1. Scope

This chapter addresses safety, environmental and regulatory information for the Ewon® Cosy+.

3.2. Power Supply

The external power supply is a third-party device that is not part of this certification.

- EUT should be supplied from an external, separately provided power supply 12-24Vdc, 30W min., certified for 70°C and for altitudes up to 2000m.
- Power supply should be separately certified according to UL/IEC 62368-1 with ES1, PS2 output or separately certified according to IEC/UL60950-1 with LPS output or Class2 per NEC.

For more information, refer to [Specification of the External Power Supply \(page 34\)](#) section.

3.3. Applicable Directives, Standards and Compliance

The Ewon® Cosy+ series described in the present document complies with the CE and the FCC regulations. Each Ewon® Cosy+ variant is certified for the region it is intended for.

You can refer to the [Ewon Technical Support Website](#) for all documents related to certifications such as CE Declaration of Conformity, FCC Declaration of Conformity, UL/CB Certificate and EC Type Examination Certificate.

3.4. Field Implementation & Environmental Conditions

3.4.1. Mandatory Cybersecurity Requirements

IMPORTANT

To comply with the latest mandatory cybersecurity requirements, please update your Ewon® Cosy+ device during installation with the latest available firmware.

Read about the procedure in the following article [How to update the firmware of an Ewon Cosy+ ?](#).

Ensure that physical access to the Ewon® Cosy+ device is protected and allow only authorized users to connect through the LAN network.

Additionally, use the available access rights levels in Talk2m to enforce the principle of least privilege.

3.4.2. General Restriction

This equipment is not suitable for use in locations where children are likely to be present.

3.4.3. Ingress Protection

The Ewon® Cosy+ has an IP20 protection grade. Therefore, the Ewon® Cosy+ is **NOT** suitable for outdoor mounting. It must be integrated in an electrical cabinet, protected from excessive heat, humidity and dust.

Do not push any sharp object into the air vents or openings of the equipment.

3.4.4. Mechanical Dimensions

All units are expressed in millimeters "mm" and are rounded up.

Figure 1. Mechanical dimensions of the Ewon® Cosy+

3.4.5. Mounting Recommendations

The product is intended to be mounted vertically with the main connector on the top.

The normal mounting position of the Ewon® Cosy+ is to be mounted on a horizontal Omega type DIN rail.

1. **Mounting the unit on DIN-rail [Omega type DIN-rail (EN 50022)]**
 Pull the slide lock (located at the bottom of the back side of the unit) downwards and present the unit in front of the DIN rail. Tilt the Ewon® Cosy+ upwards in order to hang it on the upper edge of the DIN rail by its hook. Gently tilt the unit downwards until it finds its original position. Push the slide lock upwards to fix and lock the unit on the DIN rail.
2. **Removing the unit from DIN-rail [Omega type DIN-rail (EN 50022)]**
 Release the unit by pulling the slide lock downwards while gently tilting the unit upwards. Free the unit by unhooking it from the upper rail edge.

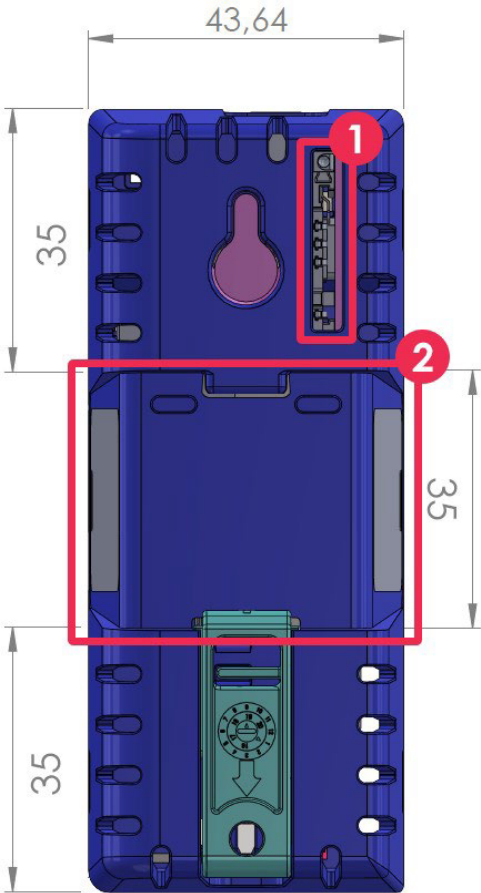

Figure 2. DIN Rail Mounting Position

#	Description
1	SIM card slot
2	DIN rail mounting bracket

• **Mounting the unit on a wall**

If there is no DIN rail available for the mounting, you can also fix your Ewon[®] Cosy+ directly on the wall.

Figure 3. Wall Mounting Position

#	Description
1	SIM card slot
2	<ul style="list-style-type: none"> • Wall Mounting Bracket (suggested screw dimensions 4,2 x 32 mm) • DIN Rail Clip with a hole for a second screw

CAUTION

Set the screws in both wall mounting brackets to prevent accidents.

3.4.6. Ventilation

To ensure a proper ventilation of the equipment, a free gap of at least 2 cm must be respected in front of all upper and lower ventilation openings of the unit.

A free gap of at least 1 cm must be respected on each side of the unit.

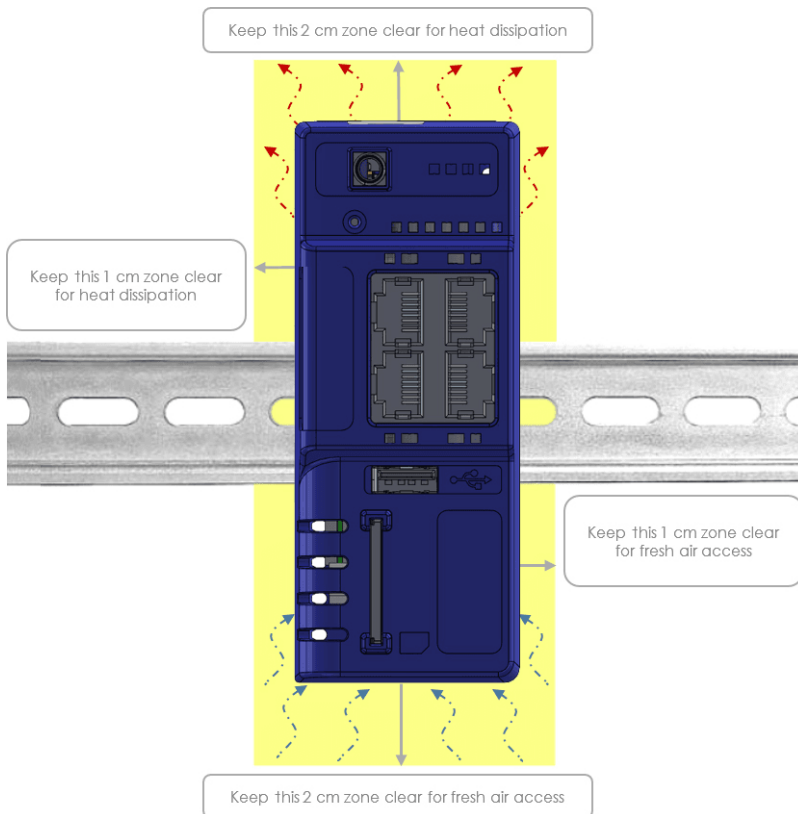

Figure 4. Free gap surrounding the Ewon® Cosy+ for heat dissipation.

3.4.7. Cabling Rules

Shielded cables must be used for Ethernet and USB connectivity of the Ewon® Cosy+ to comply with the EMC requirements.

The USB cable must be:

- Shorter than 3m
- USB 2.0 of type A (on the Ewon® Cosy+ side)
- Minimum current per contact: 0.5A (or better)

CAUTION

To prevent accidentally pulling out wires, make sure the cables are firmly attached to wire connectors.

For screw connectors, make sure that screws are properly tightened as well as routing the equipment wires separately from other high voltage wires.

3.4.8. Environmental Conditions

The equipment operates properly within the following environmental limits if it has been correctly mounted according to our recommendations:

Table 1. Environmental conditions

Operating temperature	-25°C to +60°C
Operating relative humidity	10 to 95% non-condensing
Operating altitude	Up to maximum 2000m
Storage temperature	-30°C to +70°C
Storage altitude	Up to maximum 3000m
Storage humidity	10 to 95% non-condensing

**IMPORTANT**

If the mounting situation mentioned is not applied, the specified operating temperature must be derated to -25°C to +40°C.

3.4.9. Earthing

Earthing the Ewon® Cosy+ is necessary to eliminate unwanted transient currents and to conform to the EMC requirements.

Therefore, a functional earth (FE) terminal is available on the main connector as shown in [Specification of the External Power Supply section \(page 34\)](#). Connect this FE terminal directly to allow impedance ground.

Shielded cables must be used for Ethernet and USB to comply with the EMC requirements.

3.5. Internal Battery

The Ewon® Cosy+ contains a CR2032 battery.

This battery is used to maintain the real time clock even when the unit is not powered.

The following list exposes the risks and recommendations regarding the battery:

- Risk of explosion if the battery is replaced by an incorrect type. The battery is not intended to be replaced by the consumer: the product shall be returned to the manufacturer for replacement.

**DANGER**

If you think batteries might have been swallowed or placed inside any part of the body, seek immediate medical attention.

- Do not ingest the battery as it might provoke a chemical burn hazard.
- Keep new and used batteries away from children.
- If the cell battery is swallowed, it can cause several internal burns in just 2 hours and can lead to death.
- If the equipment's enclosure does not close securely, stop using the product and keep it away from children.

4. Hardware Description

4.1. Label

The identification label of the Ewon® Cosy+ is placed on the right hand side of the housing.

The different parts of the label are described as follows:

Figure 5. Ewon® Cosy+ Label Example

The label can have variant marks depending on the model of the Ewon® Cosy+. You can find these variants in the [Ewon® Cosy+ Models \(page 16\)](#) section.

Table 2. Label of an Ewon® Cosy+

Label	Description
PN	Part Number (see syntax table below) Product Name (ex: Ewon® Cosy+ Ethernet) Model number (ex: Model 01702)
SN	Serial Number in the form of YYWW-SSSS-PP <ul style="list-style-type: none"> • YY: Year of production • WW: Week of production • SSSS: Sequential manufacturing order • PP: Product type
MAC	MAC address of the Ethernet adapter (WAN side)
Rating	Power supply requirements
Marks	CE, UL, ... logos if applicable

The applicable marks on the Ewon® Cosy+ are the following:

Marks	Description
	Conformité Européenne or European Conformity (EC)
	UL Recognized — Underwriters Laboratories
	FCC — Federal Communications Commission
	UKCA – UK Conformity Assessed
	JAPAN MIC – GITEKI CERTIFICATION

The following table explains the Part Number syntax:

Table 3. Example of a part number syntax with EC7133m_ccLL[suffix]

EC	Name of product family	EC for Ewon Ewon® Cosy+	
7	Hardware platform number	7	Ewon® Cosy+ platform
1	Communication options 1	1	1 Ethernet
3	Communication options 2	3	3 Ethernet
3	Field communication option	3	USB
m	Modem communication option	0 J K, L, M	No modem WiFi 4G modem North America, Europe, Asia-Pacific
cc	Contains one or more characters (digits and/or letters)	00	No software option
LL	Defines the firmware language	MA	Regroups EN, FR, DE, ES and IT
[suffix]	Optional “ / ” character Defines the compliances of the unit	S	Compliance with the UL / IEC / EN 60950 standard

Label	Description
1	Connector for WiFi or Cellular Antenna
2	<i>Modem Status</i> <ul style="list-style-type: none"> Steady green = connected Blinking green = Local Wifi Access Point enabled
3	<i>Reception signal level</i> Steady orange = Poor signal
4	<i>Reception signal level</i> Steady orange = Signal is OK
5	<i>Reception signal level</i> Steady orange = Signal is good

4.3. LAN Switch Specifications

4.3.1. Boot Process

After powering on or requesting a reboot of the Ewon® Cosy+, a delay (approximately 2 to 4 sec) is required before the LAN switch feature is fully operational.

IMPORTANT

The Ewon® Cosy+ should **not** be used as a pure Ethernet switch as short interruptions of the switch interface need to be taken into consideration.

NOTE

The Ewon® Cosy+ may reboot when it can no longer run a configuration. The goal of the reboot is to restore the communication channels and to ensure that the configuration is applied.

4.3.2. LAN Switch Configuration

At the very first boot or after a reset level 2, the Ethernet ports scheme will be configured as follows:

- Port #1 : LAN
- Port #2 : LAN
- Port #3 : LAN
- Port #4: WAN

NOTICE

Ethernet port#1 must be used for maintenance operations (such as updates).

The Ethernet port's functionality can be configured as wanted except for port #1 which always remains in LAN mode.

TIP

You can identify a LAN port by its green LED and a WAN port by its orange LED.

4.4. Radio Communication Models

IMPORTANT

This device is intended to be used in fixed or mobile applications only (not for portable applications).

IMPORTANT

The antenna used for this transmitter has to be installed in a space providing a safe distance of a least 20 cm without encountering anyone and cannot be located or operating in conjunction with any other antenna or transmitter.

Technical specifications and certifications by models can be found in the [Ewon® Cosy+ models \(page 16\)](#) section.

5. Ewon® Cosy+ Models

NOTE

The Ewon® Cosy+ exists in different models in order to adapt to any local internet connection type.

5.1. Ewon® Cosy+ Ethernet - EC71330

- Order code: EC71330_00MA
- Model numbers: 01702 & 11702

Figure 10. Side sticker of the Ewon® Cosy+ Ethernet - EC71330

5.1.1. Technical Specifications - EC71330

Specifications	Details
WAN Connectivity	Ethernet
WAN Ethernet	Up to 3 ports, 10/100 Mb Ethernet
LAN Ethernet	Up to 4 ports, 10/100 Mb Ethernet
Field interface	Up to 10 USB 2.0 connections, female connector 2.0
SD Card Reader	YES, for Cosy commissioning (firmware upgrade, backup, Talk2m registration)
Mechanics	Dimensions: 108,80 x 99 x 43,60 mm (H x D x W). DIN rail or wall screw fixing system.
Weight	198 grams
Power Supply	12-24 Vdc +/-20%, LPS
Extended Temperature Range	Operating: -25°C to +60°C, 10 to 95% relative humidity (noncondensing) Storage: -30°C to +70°C, 10 to 95% relative humidity (noncondensing)
Hardware	1xDO: open drain (MOSFET) 200 mA; isolation 1.5 kV 2xDI: 0 to 24 Vdc; 1.5 kV isolation
Marking	CE, cULus, FCC, UKCA, CAN ICES-3 (B) / NMS-3 (B)
Warranty	36 months
Type Tests	Temperature - Operating and Storage tested according to: <ul style="list-style-type: none"> • IEC 60068-2-1 Cold test • IEC 60068-2-2 Dry heat test • IEC 60068-2-14 Change of temperature • IEC 60068-2-30 Cyclic damp heat test Vibration and shocks tested according to: <ul style="list-style-type: none"> • IEC 60068-2-27 Bumps • IEC 60068-2-64 Vibration (broad-band random) • IEC 60068-2-6 Vibration (sinusoidal)
CE	Compliant with: <ul style="list-style-type: none"> • EMC directive 2014/30/EU (Immunity: industrial level) • ROHS2 2011/65/EU directive with amendment 2015/863 REACH regulation
UKCA	Compliant with: <ul style="list-style-type: none"> • Electromagnetic Compatibility Regulations 2016 • The Restriction of the Use of Certain Hazardous Substances in Electrical and Electronic Equipment Regulations 2012.
FCC/IC	This product complies with the Part 15 of the FCC rules
Japan	This device complies with Japanese regulations
Safety	The product fulfills the requirements of: <ul style="list-style-type: none"> • EN IEC 62368-1:2020 + A11:2020 • UL 62368-1 Third Edition • CAN/CSA C22.2 No. 62368-1: 19 Third Edition

5.2. Ewon® Cosy+ WiFi - EC7133J

- Order code: EC7133J_00MA
- Model number: 04002

Figure 11. First side sticker of the Ewon® Cosy+ WiFi - EC7133J

5.2.1. Technical Specifications - EC7133J

Specifications	Details
WAN Connectivity	Ethernet or WiFi: 802.11 a/b/g/n.
Frequencies	<ul style="list-style-type: none"> Client : 2.4Ghz (Channels 1 to 11) and 5 Ghz Access point : 2.4Ghz (Channels 1 to 11) - Maximum 3 clients connected
Security	<ul style="list-style-type: none"> Client: WPA, WPA2 and WEP Access Point: WPA2

Figure 19. Other side sticker of the Ewon® Cosy+ Japan - EC7133N

6. IP Address and Access to the Web Configuration

6.1. Factory Default IP Settings

Table 7. Default IP address

Characteristics	Values
LAN IP address	10.0.0.53
LAN subnet mask	255.255.255.0
Gateway	0.0.0.0

NOTICE

The WAN IP address is set by default in DHCP mode.

6.2. Powering On

After powering on your Ewon® Cosy+, wait approximately 2 minutes for the boot process to complete.

You can observe one of the following behaviors:

1. The **USR** LED is slowly blinking green.
The boot process has completed successfully.
2. The **USR** LED is blinking red.
The boot process has failed. It was interrupted due to a problem. The blinking pattern defines the type of issue.

The most frequent problem is a duplicate IP address detected on the LAN network. The **USR** LED blinks red 1x short, 1x long, repeatedly.

WARNING

A **Red** LED pattern during a downgrade means that the firmware CANNOT be downgraded from a firmware to another. *Example:* from firmware versions 22 to firmware versions 21.

If you need further information on LED patterns, you can find some of our LED pattern in the Chapter **Ewon® Cosy+ LED States** of our [Ewon® Cosy+ Copilot](#) document

6.3. Connecting to the LAN IP Address

Establish the first communication with the Ewon® Cosy+ by using its companion tool **Ebuddy** which can be downloaded from our [Website](#) .

Connect a LAN port (*port #1 is always set as a LAN port*) of the Ewon® Cosy+ to your computer either through a point-to-point connection or a network where there is no risk the Ewon® Cosy+'s default IP address (10.0.0.53) would conflict with another connected device.

6.4. Ewon® Cosy+ Web Interface

Methods to access the web panel of the Ewon® Cosy+:

1. While the computer is connected to a LAN port of the Ewon® Cosy+, open an Internet browser and go to the Ewon® Cosy+ web server. The **URL is the LAN IP address** of the Ewon® Cosy+.
2. You can also use **Ebuddy** to access the web panel of the Ewon® Cosy+. To get started with **Ebuddy** and access the Ewon® Cosy+, refer to the **Ebuddy** document of the [Related Documents \(page 1\)](#) section.

Before beginning the configuration of the Ewon® Cosy+, an authentication is required.

IMPORTANT

Default login and password are both **adm**. For security reasons, the Ewon® Cosy+ will ask you to change the **adm** password.

Methods to configure your Ewon® Cosy+:

1. The **Ecatcher Easy Setup** (recommended)
This method benefits from the *use of a USB stick or SD card* that holds a configuration file created inside **Ecatcher**.
More info in *Connect an Ewon Gateway to Talk2m* from the [Related Documents \(page 1\)](#) section.
2. The **Embedded Wizard Setup**:
If your Ewon® Cosy+ hasn't been configured yet, a configuration wizard is suggested to set the basic settings of the Ewon® Cosy+ and to set up the connection to the Talk2m environment.

On our website, a [Start Up Guide](#) will help you to start the configuration of your Ewon® Cosy+.

6.5. Installation and Firmware Update for Cybersecurity Requirements

WARNING

Mandatory Cybersecurity Requirements:

To comply with the latest mandatory cybersecurity requirements, please update your Ewon® Cosy+ device during installation with the latest available firmware. If your device was running a firmware below 23.0S0, then Reset Level 2 is required after firmware update.

Read about the procedure in the following article [How to update the firmware of an Ewon Cosy+?](#).

Please ensure that physical access protection to the Ewon® Cosy+ device is guaranteed and allow only authorized users to connect to the LAN network.

Additionally, use the available access rights levels in Talk2m to enforce the principle of least privilege.

There are 3 possible ways to update the firmware of an Ewon® Cosy+:

1. Using the Firmware management feature of Ecatcher/Talk2m (Included in the Talk2m pro subscription).
2. Using the firmware update feature of the Ewon® Cosy+.
3. Using the UPKG file.

Find the whole procedure in this article [How to update the firmware of an Ewon Cosy+ ?](#).

6.6. Network Interfaces and Services (Factory Default State)

The table below outlines the network interfaces available on the Ewon device and the associated services in their factory default configuration.

1. LAN Network interface

The LAN interface connects to your PLC and HMI, enabling remote access. To meet cybersecurity requirements, ensure physical access to the Ewon device is restricted, and allow only authorized users to connect through the LAN network.

Network Interface	Service	Port (default)	Default Status
Ethernet LAN	ICMP	N/A	Enabled
Ethernet LAN	Web Configuration Interface (HTTP)	TCP 80	Enabled
Ethernet LAN	2nd Web Configuration Interface (HTTP)	TCP 81	Enabled
Ethernet LAN	Device discovery and configuration (Ebuddy)	UDP 1507	Enabled
Ethernet LAN	FTP Server	TCP 21	Disabled
Ethernet LAN	NTP relay	UDP 123	Disabled
Ethernet LAN	DHCP server (in advanced settings only)	UDP 67	Disabled

2. WAN Network interface

By default, no services are enabled on the WAN interface. Only outgoing connections are used to establish remote access.

Talk2M Connectivity:

- a. Outbound ports: TCP 443, UDP 1194
- b. For more details, refer to: [Talk2m Connectivity Requirements](#)

NOTE

The WAN interface depends on the Cosy+ device type and the configured Internet communication method. It can be one of the following:

- Ethernet WAN (switch port 4 by default)
- WiFi modem connection (WiFi Internet connection)
- Cellular modem connection (4G Internet connection)

3. VPN Network Interface

The VPN interface becomes available when a secure VPN connection is established for remote access. When using Talk2m, this interface is accessible only to identified and authorized users of the associated Talk2m account.

Network Interface	Services	Port (default)	Default Status
VPN Connection	ICMP	N/A	Enabled
VPN Connection	Web Configuration Interface (HTTP)	TCP 80	Enabled
VPN Connection	2nd Web Configuration Interface (HTTP)	TCP 81	Enabled
VPN Connection	FTP Server	TCP 21	Disabled
VPN Connection	USB over IP	TCP 6000 TCP 5473	Disabled

7. Troubleshooting

7.1. Standard Boot Process

The standard boot of an Ewon® Cosy+ takes approximately 2 minutes to complete.

During this process, all LEDs are first shortly on (except **BI1**), then only the **PWR** LED stays steady green.

As soon as the boot process is completed and the unit is ready to be used, the **USR** LED blinks green slowly to indicate the Ewon® Cosy+ is operational. Other LEDs might be steady green (if the device is connected to Internet, Talk2m...).

Figure 20. PWR is steady green while USR blinks green slowly

7.2. Reset of the Ewon® Cosy+

The reset button **BI1** is located on the front of the Ewon® Cosy+ (see [Front \(page 11\)](#) section).

The Ewon Ewon® Cosy+ features two levels of reset: **User Reset** and **Factory Reset**.

7.2.1. First Reset Level: User Reset

The first level of reset is a selective reset that erases the user files part and the system settings. This type of reset does not alter the communication parameters of your Ewon® Cosy+.

NOTICE

Your Ewon® Cosy+ remains connected to Internet and Talk2m - if configured previously - even after a reset level 1.

Follow the procedure below to perform a reset level 1:

1. Power off the Ewon® Cosy+.
2. Press and maintain the reset button while powering on.
The **BI1** LED lights up (green color).
3. Keep the reset button pressed for approximately 30 seconds until the **USR** LED blinks red 1x per second.
4. Release the reset button.

**IMPORTANT**

If you don't release the reset button when the **BI1** LED blinks red, you will trigger a reset level 2 which will entirely format your Ewon® Cosy+.

The **BI1** LED turns off.

5. Wait approximately 30 seconds for the reset level 1 to complete.
The Ewon® Cosy+ automatically restarts and the unit is ready to be used.

When the **USR** LED slowly blinks green (takes approximately 2 minutes), your Ewon® Cosy+ is operational.

7.2.2. Second Reset Level: Factory Reset

The second level reset restores the Ewon® Cosy+ to its factory settings.

This operation consists in 3 steps:

1. Format the entire non volatile memory, including all COM parameters and IP addresses.
2. Full hardware auto-test with result shown by the **USR** LED.
3. Return to ex-factory configuration (default configuration).

Follow the procedure below to perform a reset level 2:

1. Press and maintain the reset button while powering on.
The **BI1** LED lights up (green color).
2. Keep the reset button pressed for approximately 35 seconds until the **USR** LED is no longer blinking red but goes to steady red.
3. Release the reset button.
The **BI1** LED turns off.
 - The **USR** LED quickly blinks green: the Ewon® Cosy+ is processing the reset request.
 - The **USR** LED blinks red with the following pattern: 500ms ON, 500ms OFF. This pattern indicates that your Ewon® Cosy+ is ready for reboot.
 - Any other pattern indicates an error
 - The Ewon® Cosy+ **does NOT restart** by itself in normal mode and remains running in this diagnostic mode.
4. Power off and on the Ewon® Cosy+ to reboot it in a normal mode.
The Ewon® Cosy+ returns to its default COM parameters and factory IP addresses (such as LAN 10.0.0.53) after this level 2 reset is performed.

**NOTICE**

If an error pattern occurs on the **USR** LED, please check out our [Support](#) page.

7.2.3. Reset Matrix

Table 8. Impact matrix of a reset

Reset Level	Erased or Reset	Preserved
Impact of a reset level 1: User reset	Ewon® Cosy+ identification	LAN IP address + mask
	Custom user web site	Internet access
	Talk2m configuration	User Password
		Language settings
		Modem / WiFi settings
		Proxy configuration
		LAN switch configuration
Gateway (USB, NAT 1:1)		
Impact of a reset level 2: Factory reset	<p>The Ewon® Cosy+ will be reset to a factory settings configuration.</p> <p>All parameters will be lost except the VPN configuration.</p> <p>A reset level 2 does not delete the link between an Ewon® Cosy+ and the Talk2m account on which it is registered. If you wish to register the Ewon® Cosy+ to a different Talk2m account, you will first need to delete its registration from the previous Talk2m account, using Ecatcher.</p>	

NOTE

After a reset level 1, gateway (USB, NAT 1:1) configurations remain even if the Wizards indicates otherwise on the Ewon Web Interface.

Appendix A.

1. Main Connector

As shown in the image below, the **female mating connector** is labelled with the appropriate symbols.

Figure A.1. The Ewon® Cosy+ Female connector

Table A.1. Labels on main connector

PIN	Icon	ID	Description
1	O.	DO_COM	Output signal (0V ground) connected to the emitter of the MOSFET transistor
2	O	DO	Output signal connected to the drain of the MOSFET transistor
3	O ₊	DO_Vdc	Common of the external predrive power supply (between +12 and +24 Vdc
4	I.	DI_COM	Ground of the input (isolated)
5	I ₁	DI1	Input signal 1
6	I ₂	DI2	Input signal 2
7	+	Power in VDD+	Between +12 and +24 Vdc
8	-	Power in GND-	0V
9		Functional earth	

Table A.2. Characteristic of main connector

Characteristic	Value
Connector type	MINICONNEC MC model Type MC 1.5 / 9-ST-3.5 Pitch = 3.50mm 9-pin female
Maximal tightening torque	0.25Nm In the absence of a torque wrench, a soft manual tightening is sufficient.

2. Specification of the External Power Supply

- EUT should be supplied from external, separately provided power supply 12-24Vdc, 30W min., certified for 70°C and for altitudes up to 2000m.
- Power supply should be separately certified according UL/IEC 62368-1 with ES1, PS2 output or separately certified according to IEC/UL60950-1 with LPS output or Class2 per NEC.

NOTICE

This is a sink output to ground. The transistor acts as a switch ground.

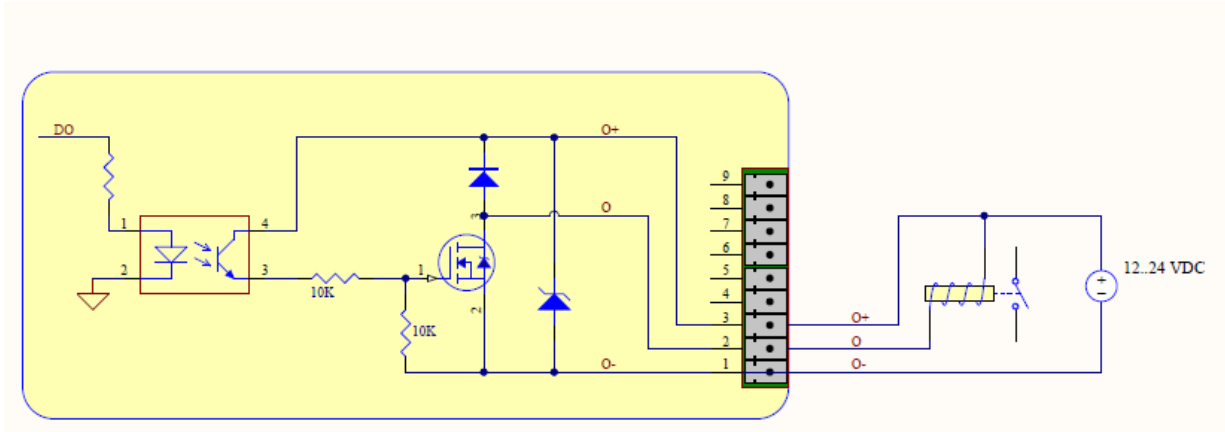

Figure A.3. External wiring of the Digital Output

3.1. Possible Features of the DI & DO

Wiring the Digital Input and Digital Output allows you to externalize some features (such as connectivity condition), as described below:

Table A.5. Features linked to DO & DI

LED	Connector	Description
KEY	DI1	Authorize or prevent the Internet connection
		Authorize or prevent the VPN connection
		Trigger an SMS or email notification
DI2	DI2	Trigger an SMS or email notification
T2M	DO ^a	Can be wired to an external device to propagate the Talk2m status. The DO is set to 1 when there is an active remote connection (= remote user connected). Summary of the DO status based on Talk2m connectivity: <ul style="list-style-type: none"> • T2M LED off → DO off There is no VPN tunnel established. • T2M LED steady → DO off The VPN tunnel is established but there is no active remote connection (no remote user connected through Talk2m). • T2M LED blinking → DO on The VPN tunnel is established and there is an active remote connection (a remote user is connected through Talk2m).

^aDuring the starting boot process, the DO is set to ON for a short time (2 seconds).

The configuration of these conditions is done as part of the **DI Config** wizard.
